# THE GRANDIS TALLEST TREE IN NSW

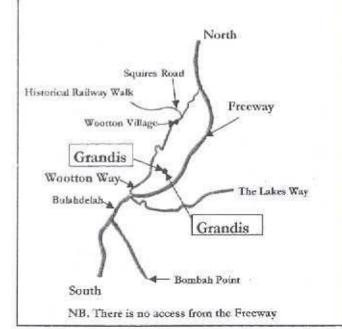

The Grandis is located in the Mvall Lakes National Park on Stoney Creek Road and is accessible from both the Lakes Way and Wootton Way. The Grandis is the tallest recorded tree in NSW, a Flooded Gum (Eucalyptus grandis).

The tree stands 86 metres high and measures 2.7 metres in diameter. It is estimated to be about 400 years old and would have been quite a large tree when Cook sailed up the nearby coast. The Grandis is home to a variety of both flora and

An extensive upgrade of the viewing area and interpretive board has recently been completed.

fauna in the area.

National Parks went to extreme measures to protect the tree throughout the upgrade. All materials brought into the area were sanitized. Workers had to disinfect their boots and all tools on arrival. The tree was scaled and it's condition assessed. It is hoped that, with good management, the tree will be around a lot longer for future generations to marvel at. Very few trees of this age are now in existence.
